Honeywell
THE POWER OF CONNECTED

Agenda

- ▶ Introduction: Purpose and Goals
- ▶ Case Study 1: Textbook Approach
- ▶ Case Study 2: New Application
- ▶ Case Study 3: Service Design
- ▶ Case Study 4: Rigid Constraints
- ▶ Case Study 5: Third Party Application
- ▶ Discussion: Questions, Answers & Feedback

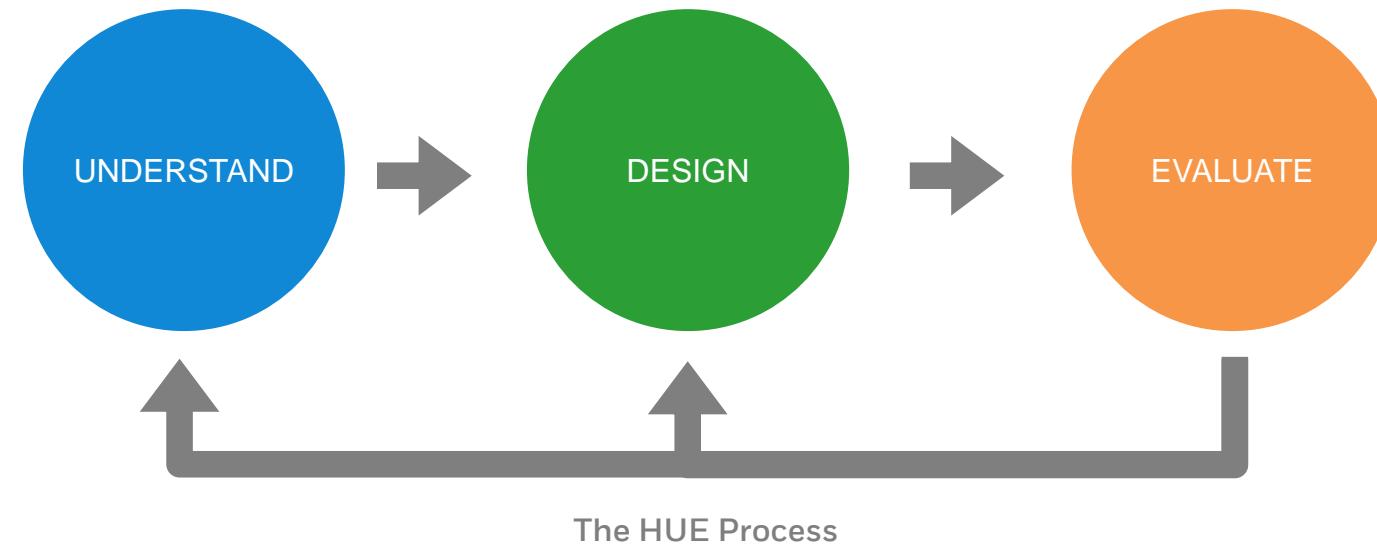

A photograph showing a person's hands working at a desk. A laptop is open on the left, and a hand holds a pen over a notebook on the right. A yellow vertical bar is positioned on the far left.

Introduction

Purpose and Goals

THE QUESTION TO ANSWER

“ How do I incorporate HUE into my Honeywell projects to make them successful? ”

To answer this question, success needs to be examined and quantified

- What is success?
- How is success measured?
- Identifying success and risk factors
- Acting on success and risk factors
- Making successes repeatable

Case Study 1

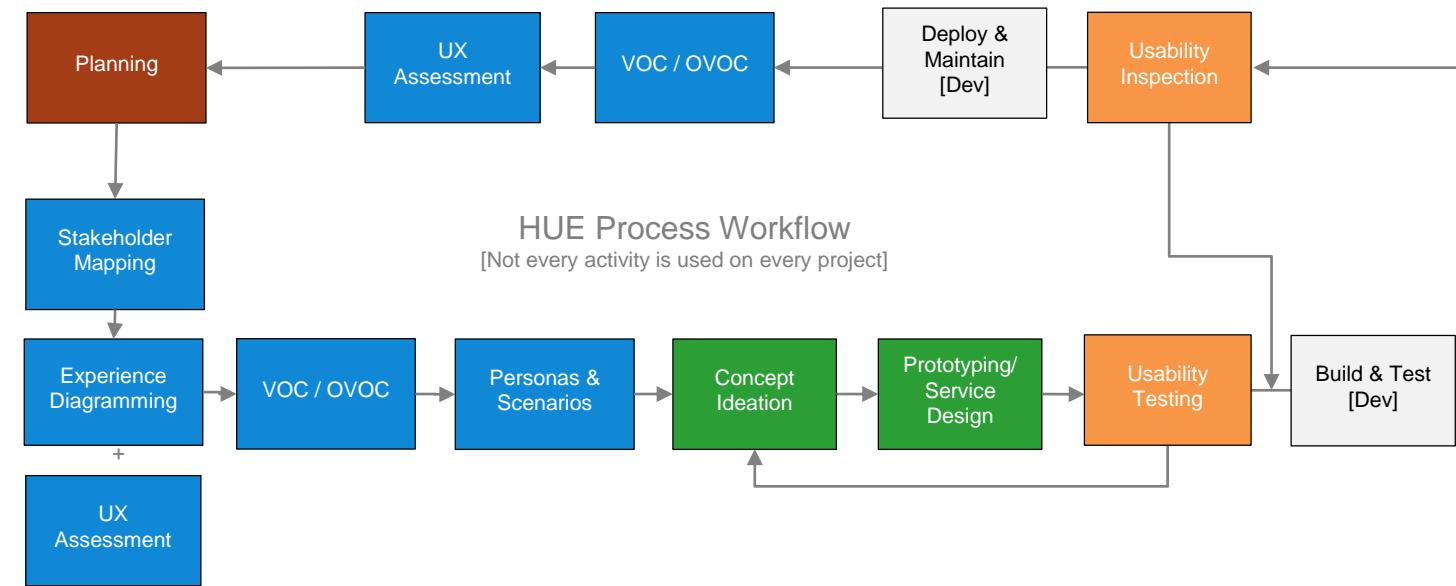

Textbook Approach

CASE STUDY PARAMETERS: Textbook Approach

The **Textbook Approach Case Study** is a scenario in which the HUE Team is engaged and planned for at the inception of the project.

- **Understand:** Activities that inform the strategy through user requirements data
- **Design:** The answer to the user's needs and the solution to the issues raised during the **Understand** phase
- **Evaluate:** Testing to determine whether or not the design concept really satisfies the user's needs. Results may require a return to **Understand** or **Design** phases for further iterations.

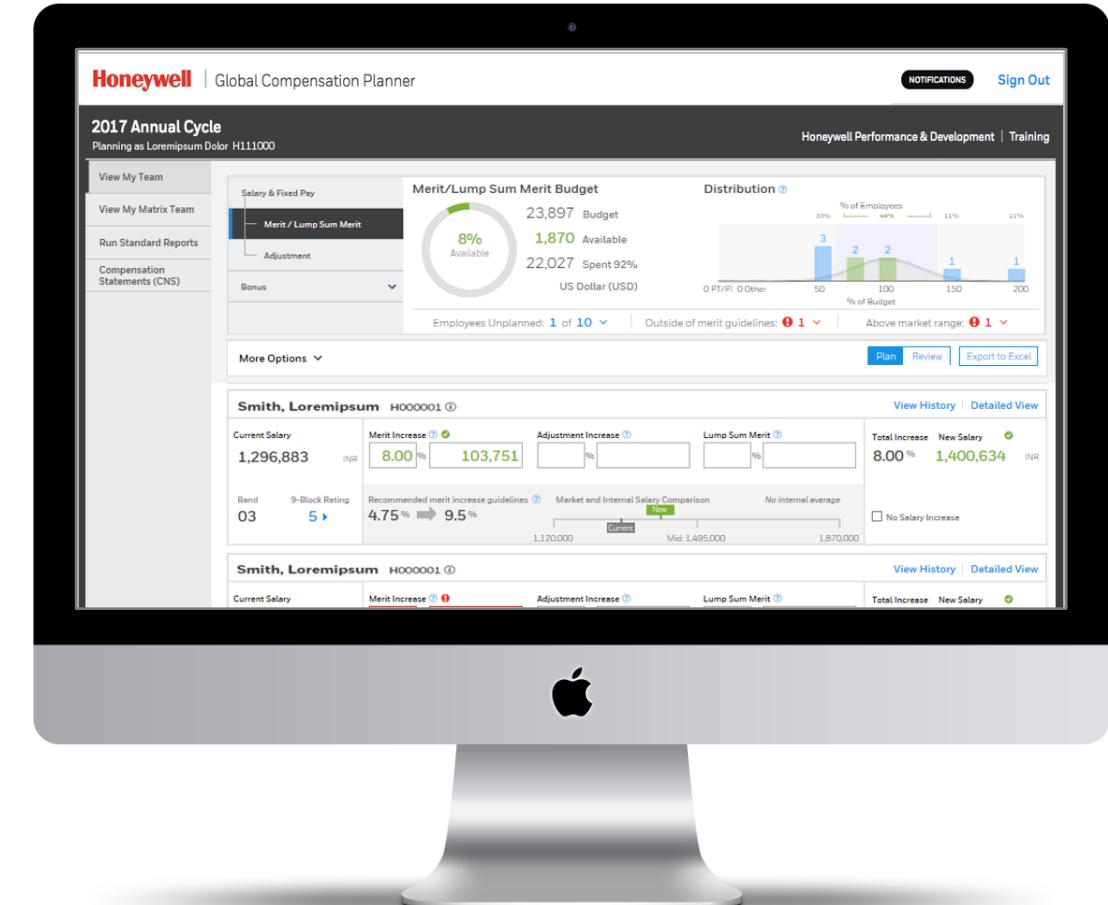

PROJECT OVERVIEW: Global Compensation Planner (GCP)

Project Brief:

Redesign of the GCP which is a HON tool, used by more than 16,000 managers globally, to plan compensation for their employees.

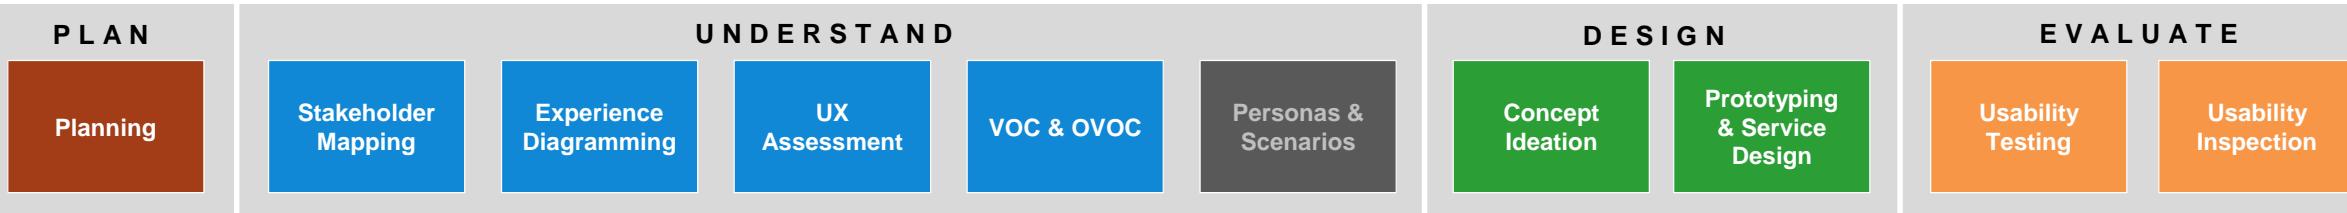

Project Goals:

- **Speed:** Reduce task completion time
- **Productivity:** Reduce complexity to achieve goals
- **Satisfaction:** Increase satisfaction and enhance self-service functionality

HUE APPROACH: Global Compensation Planner (GCP)

HUE Process Building Blocks Used on this Project:

Understand:

- **UX Assessment:** Established the baseline metrics
- **Stakeholder Mapping:** Identified the audience
- **OVOCs:** Gathered user-centered requirements
- **OVOC Analysis:** Identified pros, cons and improvement opportunities

Design:

- **Concept Ideation/Prototypes:** Increased efficiency with visualizations
- **Progressive Disclosure:** Reduced system complexity

Evaluate:

- **Usability Testing:** Validated the improvements against the user needs

PROJECT RESULTS: Global Compensation Planner (GCP)

- The team received the **1Q2017 HUE Award** from Darius Adamczyk. This was a UFE first.
- User planning time was **reduced by 48%**
- Navigation was noticeably easier to use (**customer effort decreased by 0.4**)
- Usability **improved by 32%**

Would have been better with more graphics than numbers.

Wow, this is complex

If you're a new person with no training, it's not intuitive at all.

I planned salary for 12 employees in under 10 minutes.

Will make planning decisions easier.

Best "software" thing I've seen HON do...

Case Study 2

New Application

CASE STUDY PARAMETERS: New Application

The **New Application Case Study** scenario positions a HUE focal to support the agile development of new software / applications.

HUE Subject Matter Expert (SME):

- HUE activities are executed to the backlog
- Participation in sprint planning / retrospectives
- Iterative design
- Parallel research during sprints

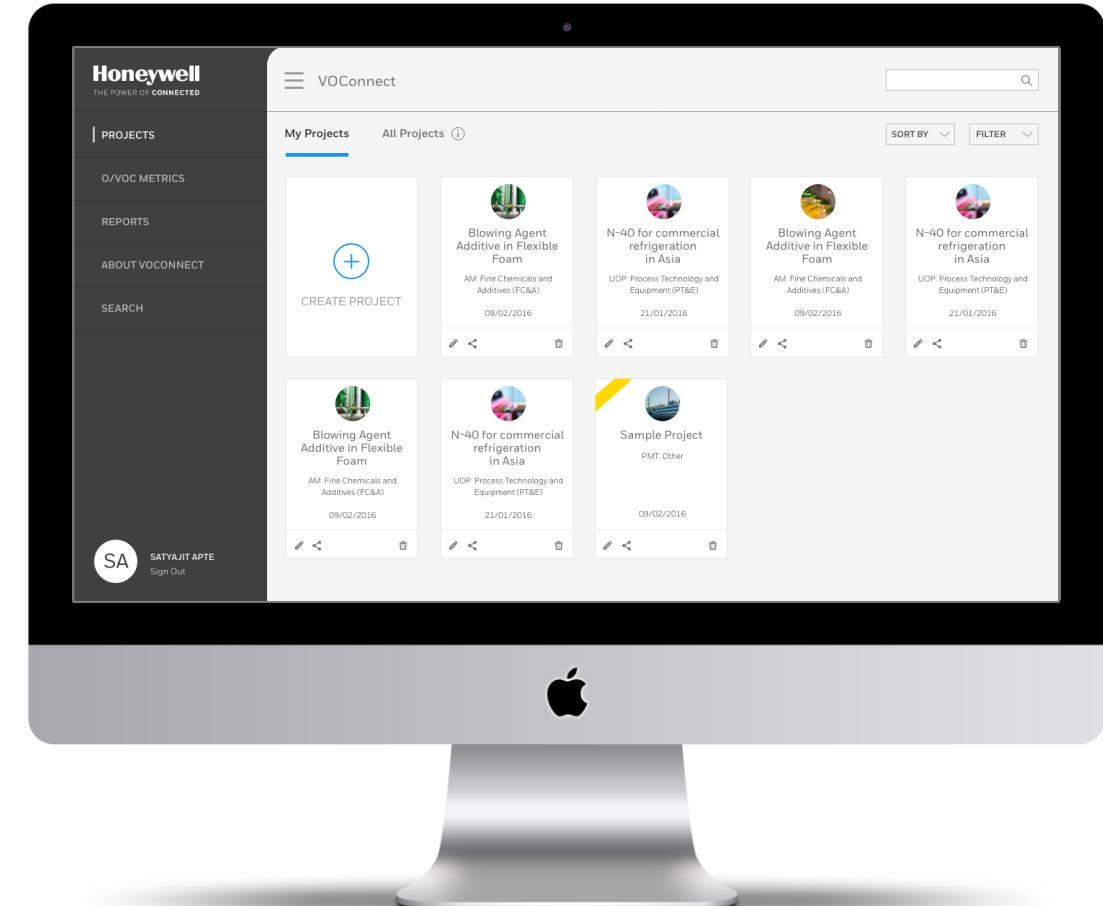

PROJECT OVERVIEW: VOConnect

Project Brief:

Redesign of the PMT beta O/VOC tool to improve UX and add functionality.

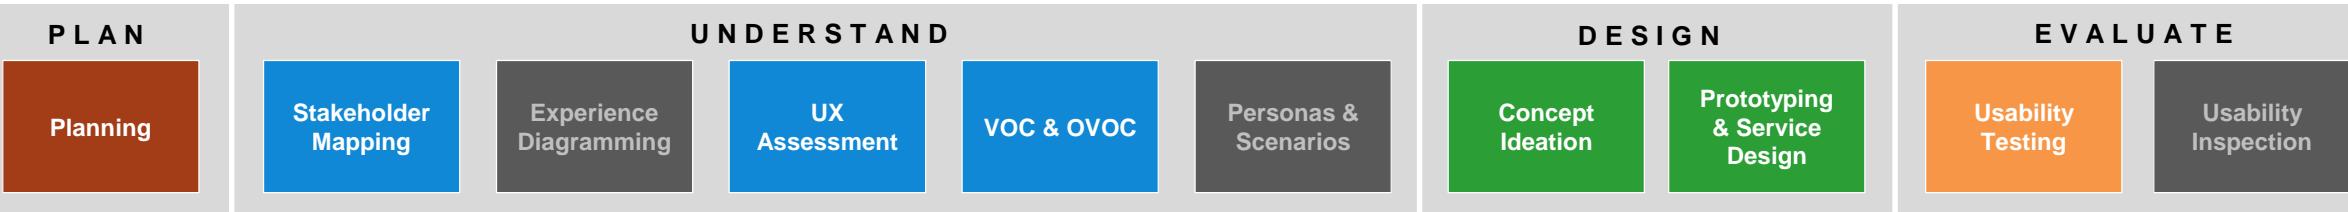

Project Goals:

- **Centralize:** Create a centralized space to store O/VOC data that is accessible and searchable
- **Standardize:** Standardize the data structure to improve data quality, integrity and shareability
- **Visibility:** Provide clear visibility of the quantity and quality of O/VOCs to executive leadership

HUE APPROACH: VOConnect

HUE Process Building Blocks Used on this Project:

Understand:

- **UX Assessment:** Compared functionality and UX against project goals
- **VOCs:** Collected user requirements and pain points

Design:

- **Concept Ideation:** Determined integration points
- **Wireframes:** Integrated user experience improvements
- **Prototype:** Iterated with users and stakeholders

Evaluate:

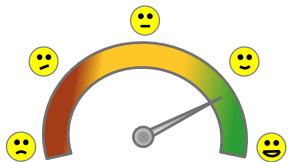

- **Usability Testing:** Validated the design against user requirements
- **Development Support:** Provided oversight during the development phase

PROJECT RESULTS: VOConnect

Right and Fast

100% CSat LOS

4.17 CSat Average

NPS

Passive

Usability Improvements:

- **Easy-to-use interface** for sales and marketing teams
- Standardized data format **reduced the cost** associated with incorrect templates and analysis of unstructured data
- Intuitive design **enabled users to capture structured data**

Flexibility Improvements:

- **Enable Enterprise Workflow**
- Supports **the 6 P's**
- **Custom questionnaire creation**

Functionality Upgrades:

- **Integrated two new modules:** Search and O/VOC Metrics
- Insight and Metrics **Report generation on demand**

Case Study 3

Service Design

CASE STUDY PARAMETERS: Service Design

The **Service Design Case Study** is a scenario in which a service is examined from the user's viewpoint, rather than the business's internal needs and offerings.

- Gather a thorough understanding of the service; capabilities and limitations
- Identify efficiencies through user input
- Incorporate efficiencies through prototyping and testing
- Validate user needs with measurable value in order to determine success

PROJECT OVERVIEW: Intelligrated IT Systems Migration

Project Brief:

Honeywell completed its \$1.5B acquisition of Intelligrated in 3Q16. An immediate step towards the integration into Honeywell required all Intelligrated employees to have their IT systems migrated into the Honeywell environment.

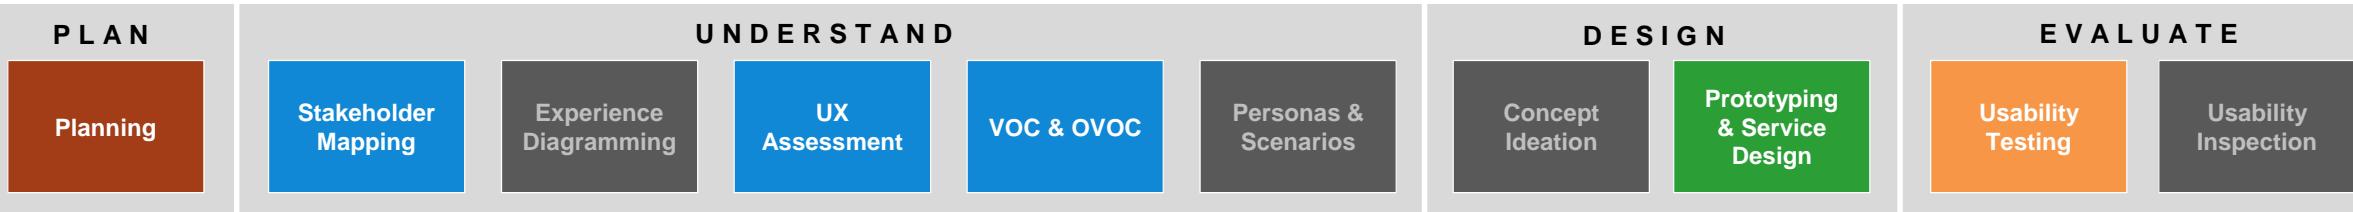

Project Goals:

- **Unify:** Consolidate and streamline multiple instruction documents into a single DLS compliant document
- **Integration:** Migrate the Intelligrated IT systems for 3,000+ employees into the Honeywell environment
- **Timely:** 100% of the Intelligrated employees needed to be fully migrated by December 31, 2017

HUE APPROACH: Intelligigrated IT Systems Migration

HUE Process Building Blocks Used on this Project:

Understand:

- **OVCs:** To understand user characteristics, goals, needs, feelings, & concerns
- **Stakeholder Mapping:** Documented & prioritize the users
- **UX Assessment:** Evaluated the original documentation for improvement opportunities

Design:

- **Iterative Prototyping:** End-users piloted the migration process
- **Iterative Prototyping:** Aligned visual design with the Design Language System (DLS)

Evaluate:

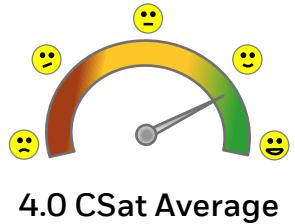

- **Usability Testing:** Validated the final documentation
- **KPIs:** Measured success with Key Performance Indicators (KPIs)

PROJECT RESULTS: Intelligegrated IT Systems Migration

Go Beyond

100% CSat LOS

4.0 CSat Average

NPS

Promoter

Unification:

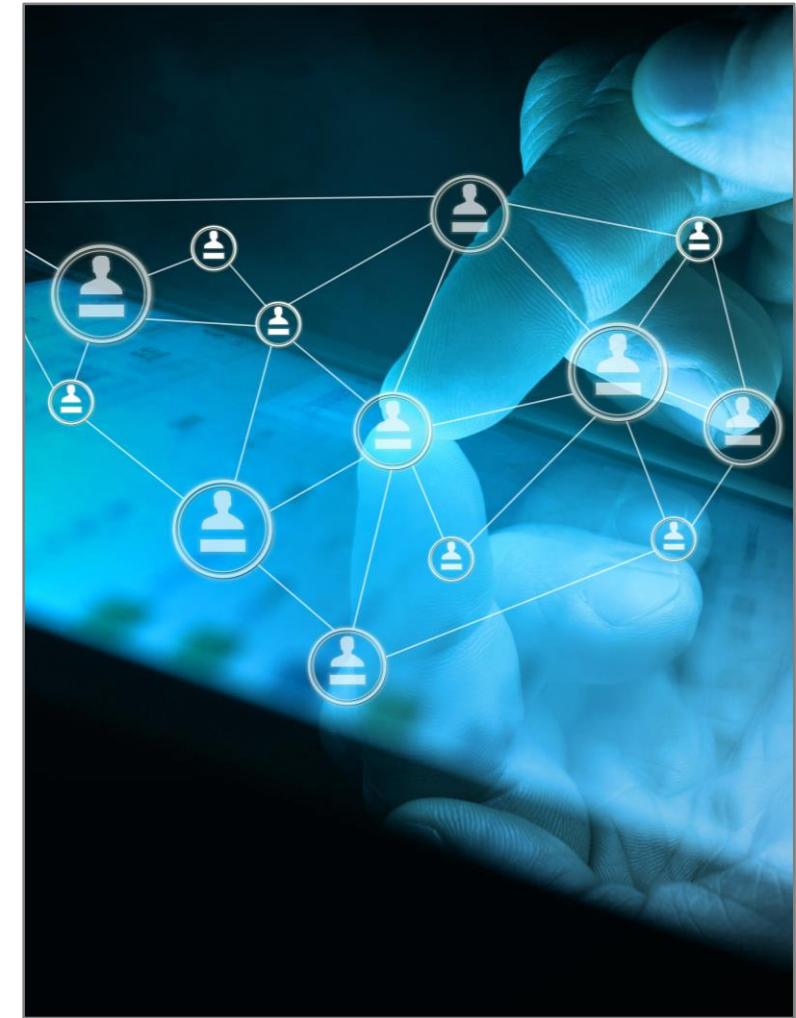

- Unified disparate documents into a single (DLS) compliant document of ~50 pages
- Improved Flesch-Kincaid Readability Metrics

Integration:

- Over-achieved on KPIs (Time & Ease-of-Use)
- Less than 1% of Intelligegrated Employees contacted the Service Desk during migration

Timeliness:

- 100% of Intelligegrated Employees migrated by ~1 month ahead of schedule

Case Study 4

Rigid Constraints

CASE STUDY PARAMETERS: Rigid Constraints

The **Rigid Constraints Case Study** scenario is a project restricted by constraints that the HUE designer must plan and execute work within. Typically, rigid constraint projects are the result of a late engagement with the HUE Team, which diminishes the value of **Understand** activities.

Examples:

- Truncated deadlines
- Low resources pools
- Inflated scopes
- Geolocation / Co-location
- Technology dependencies

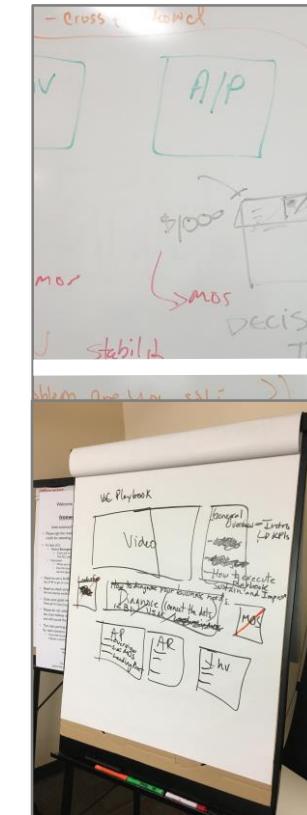

PROJECT OVERVIEW: Working Capital Playbook Website

Project Brief:

Identified as one of the most important initiatives for 2018 by Darius Adamczyk. Working Capital is the combination of Inventory, Accounts Payable and Accounts Receivable assets to create a website and playbook.

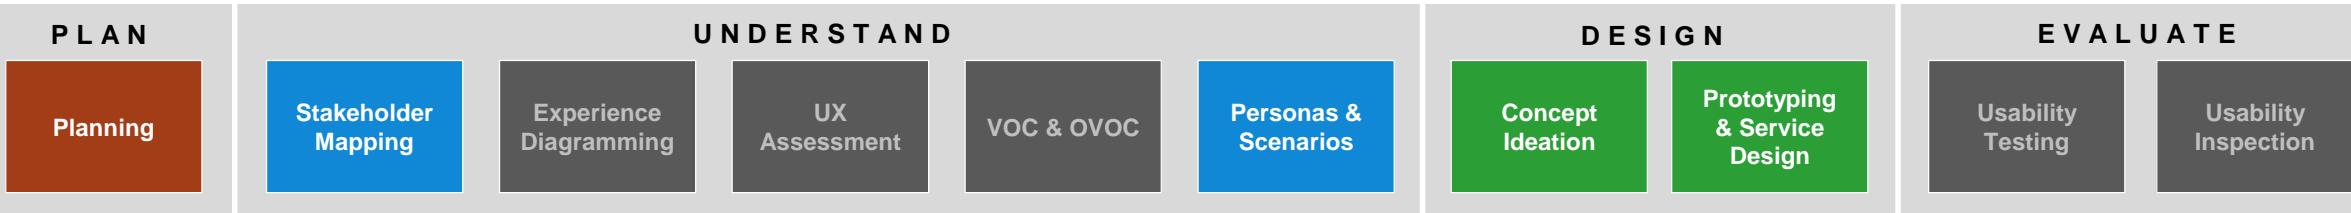

Project Goals:

- **Analyze:** Assess and compile a set of tools and processes from across Honeywell
- **Unify:** Categorize and operationalize the tools and processes into a complete website
- **Improve:** Identify gaps to produce components that satisfy the requirements, needs or content

HUE APPROACH: Working Capital Playbook Website

HUE Process Building Blocks Used on this Project:

Understand:

- **Stakeholder Mapping:** Identified the target audience and key stakeholders
- **HOS Personas:** Leveraged Honeywell Employee and HOS Personas

Design:

- **Concept Ideation:** Unified disparate Honeywell assets
- **Iterative Prototyping:** Provided clear asset integration for all stakeholders

Evaluate:

- **Workshops:** Conducted two HUE stakeholder workshops to maintain consensus and focus

PROJECT RESULTS: Working Capital Playbook Website

Analyzation:

- **Lean approach** produced a focused and efficient team
- **Leveraged existing assets** to reduce waste
- Empowered team members **rapidly analyzed disparate data** and made decisions to maintain the critical path

Unification:

- **Strategic coordination** successfully launched the website and playbook within 10 weeks
- Ensured compliance by **adhering to Digital Workplace standards** and guidelines

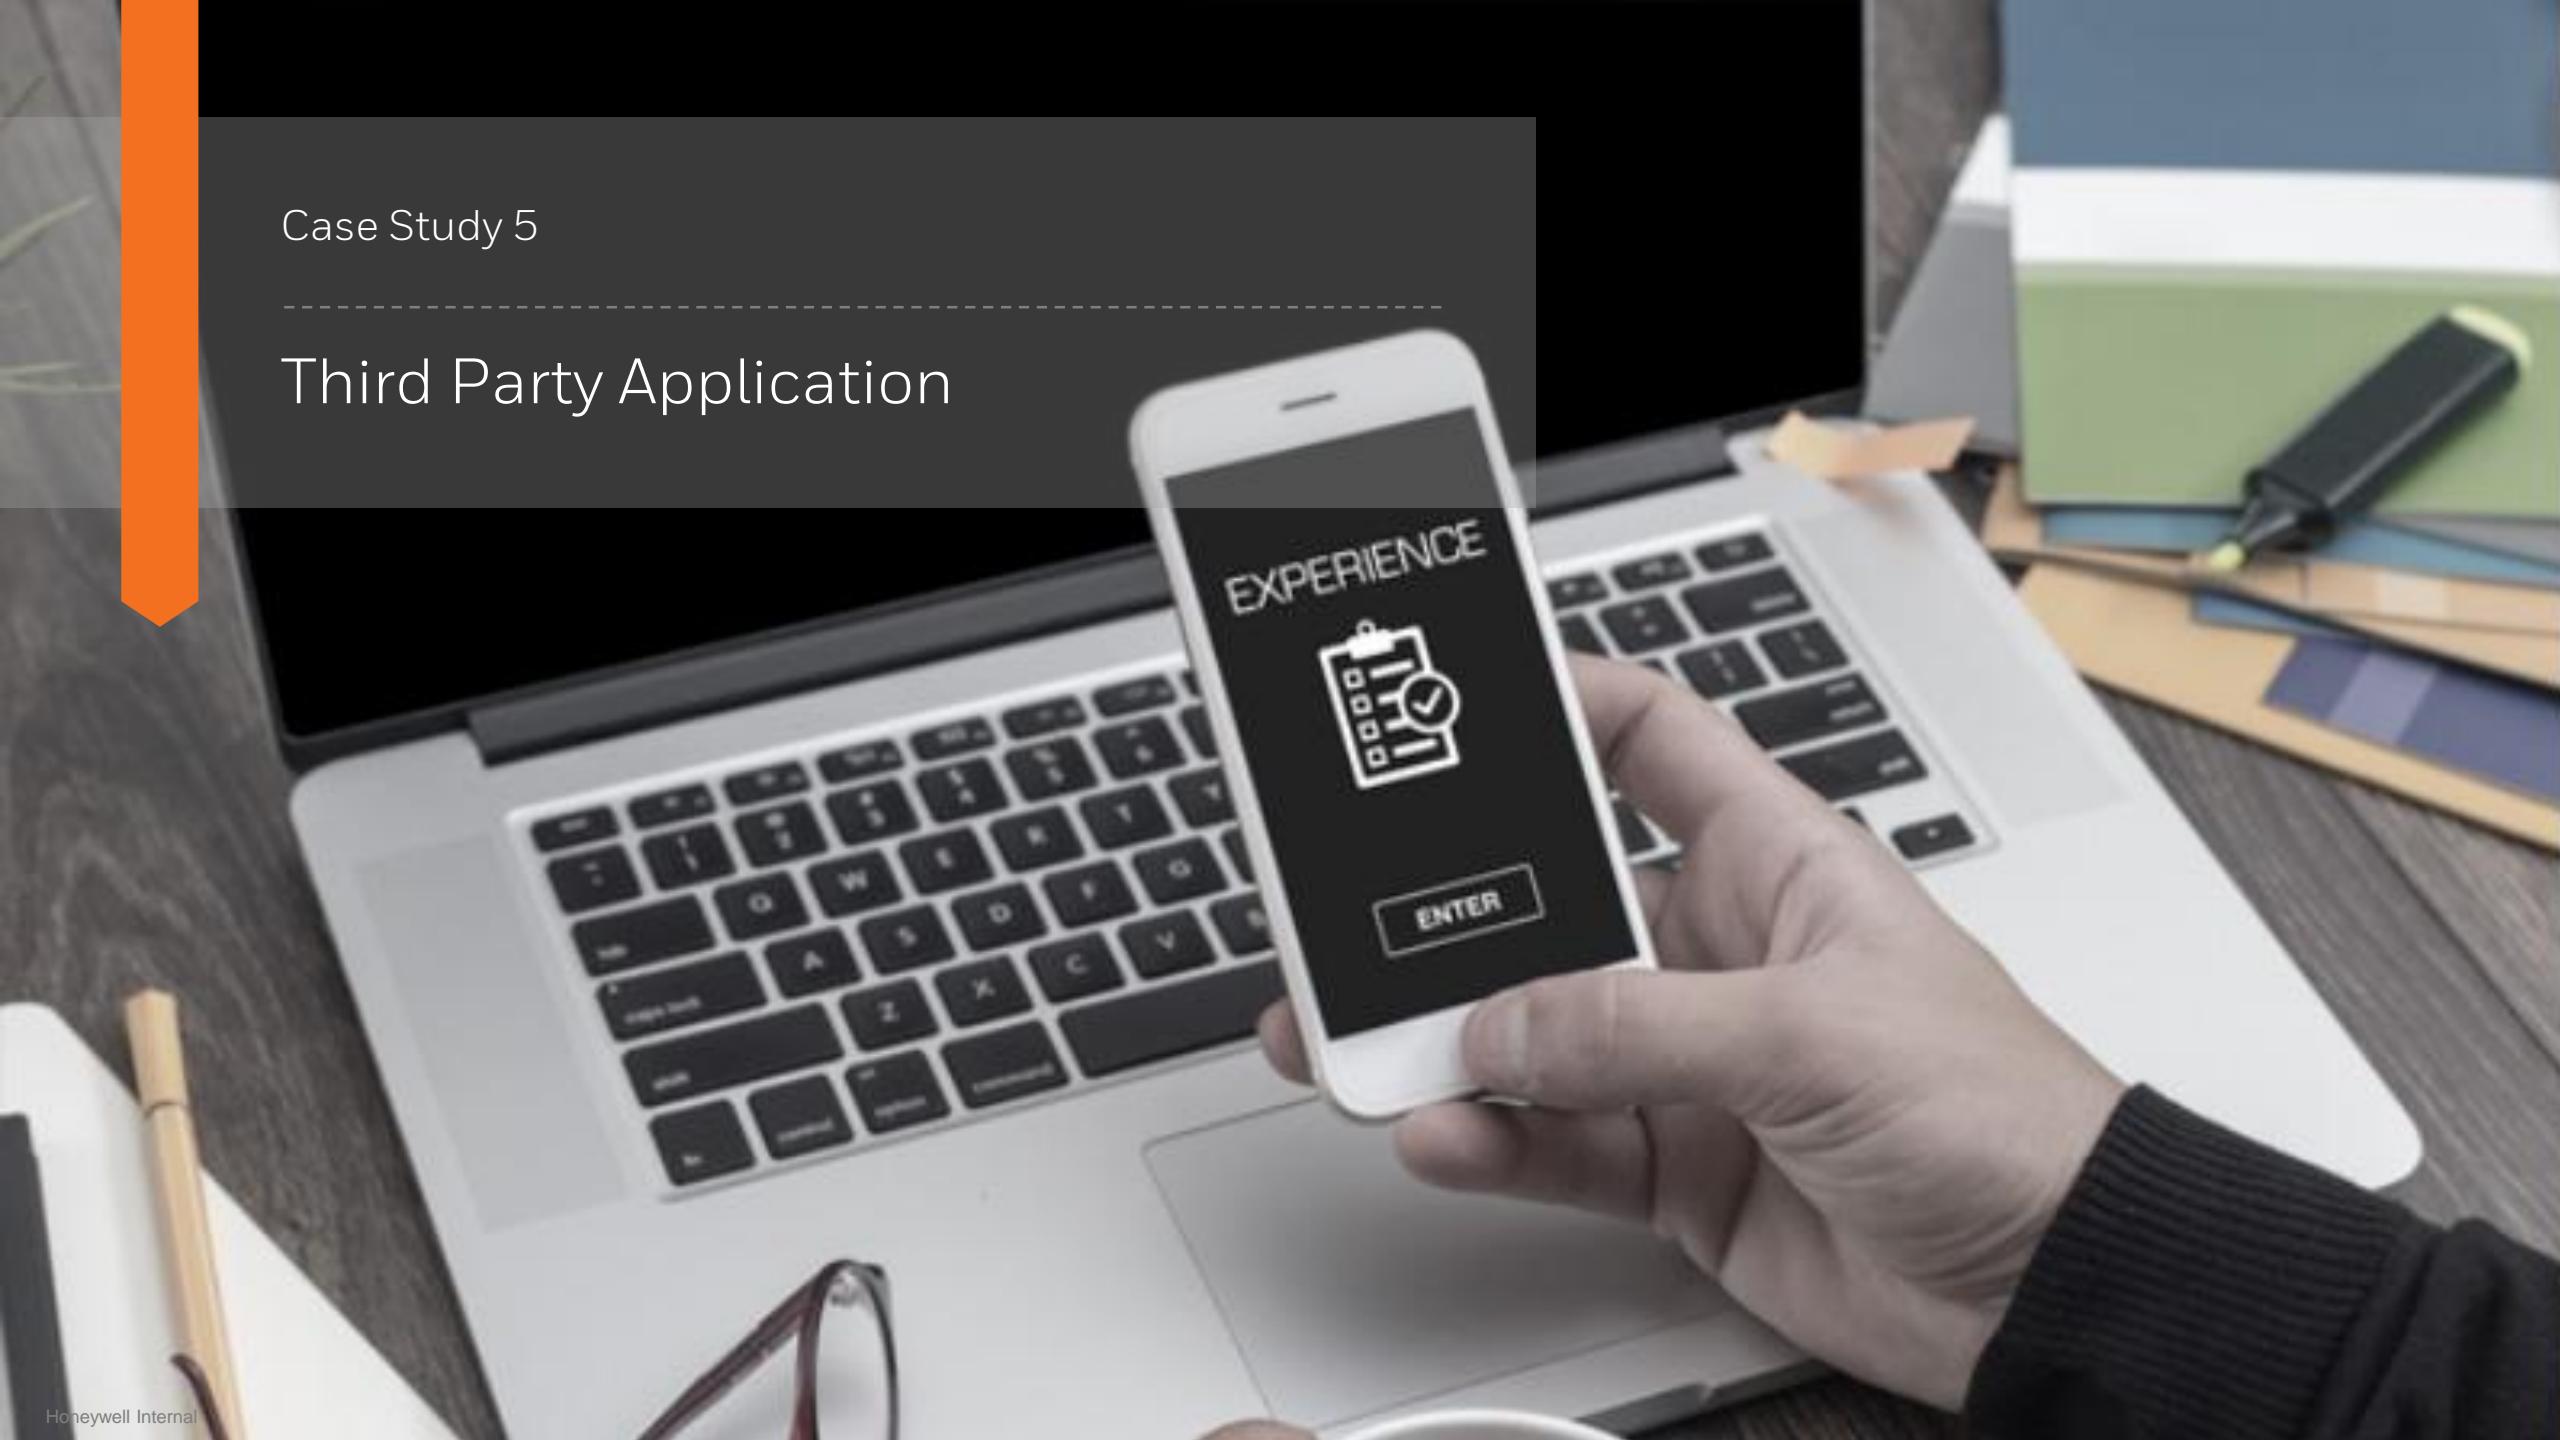

Improvements:

- Created efficiencies by **unifying disparate Honeywell assets**
- Gap analysis revealed various **improvement opportunities** that were addressed during development

Case Study 5

Third Party Application

CASE STUDY PARAMETERS: Third Party Application

The **Third Party Application Case Study** scenario is centered on a third party, retail software application. This automatically imposes several rigid constraints affected by **customization cost** versus **configuration cost**.

Regardless of the configure / customize decision, there are some basic user experience activities that can improve the integration of a third party retail application.

PROJECT OVERVIEW: IT Direct ServiceNow

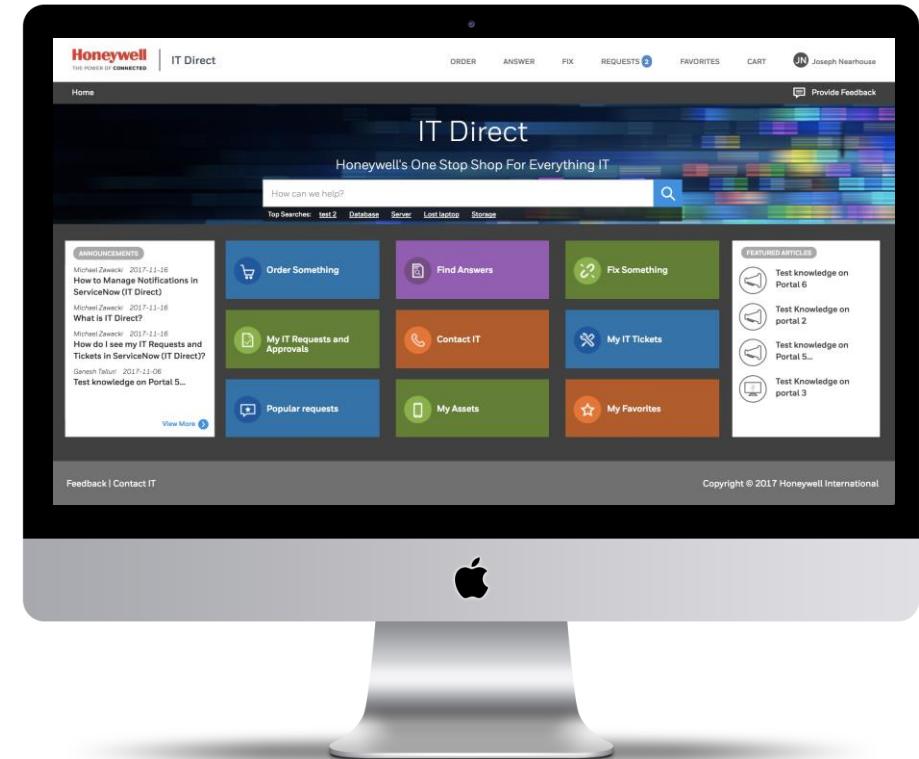

Project Brief:

ServiceNow is a 3rd party, cloud-based application for IT infrastructure. HUE was engaged to customize the application, apply Digital Workplace (DWP) structure and focus on IT Direct – the customer facing portal.

Project Goals:

- **Brand:** Apply the Honeywell Design Language System (DLS) and Digital Workplace (DWP) structure
- **Configure:** Change the default workflow to match the Experience Diagramming needs for all of Honeywell
- **Optimize:** Create efficiencies within the UX, UI and workflow to increase productivity, improve usability and decrease complexity

service**now**

HUE APPROACH: IT Direct ServiceNow

HUE Process Building Blocks Used on this Project:

Understand:

- **OVCs:** Interviews to understand customer's needs
- **Stakeholder Mapping:** Identified, mapped and prioritized 15 stakeholder groups
- **UX Assessment:** Created a baseline to inform the wireframes
- **IT Personas:** Leveraged existing IT personas

Design:

- **Prototyping:** Produced UX, UI documentation for 3rd party developers
- **Concept Ideation:** Conducted card sorting to optimize the information architecture
- **DLS:** Maintained Honeywell Branding standards with the DLS and DWP assets

Evaluate:

- **System Usability Score (SUS):** Established the baseline usability metrics (pre and post)
- **Usability Inspection:** Validated DLS and DWP compliance
- **Usability Testing:** Validated project against user needs

PROJECT RESULTS: IT Direct ServiceNow

Think Big...TMIH

66.7% CSat LOS

3.83 CSat Average

NPS

10

Promoter

- Launched to **140,000 customers with minimal escalations**
- **Integrated Digital Workplace (DWP)** structure and guidelines into the application
- **Simplified the complexity** of the UI in order to make it more intuitive
- **Consolidated disparate IT systems** into a single platform (ACT IT, GET IT, Remedy, IT HelpNow)

Before

After

A photograph showing several people in what appears to be a classroom or lecture hall. In the foreground, a person's hands are visible; one hand holds a white smartphone, and the other hand holds a yellow pencil, poised as if to write on the phone's screen. In the background, other people are seated at desks, facing towards the front of the room where a presentation might be taking place. The overall atmosphere suggests a learning environment.

Discussion

Questions, Answers and Feedback

FACTORS THAT CONTRIBUTE TO REPEATABLE SUCCESSES

Summary: HUE integration contributes to success but does not guarantee it alone. Program success requires an organized approach, with a firm understanding of User Experience (UX) principles, to drive success in your overall program.

Common UX Success Factors

- HUE Integration during requirements gathering
- UX saves time by uncovering issues early
- Speak directly to the users for requirements
- At least 2 – 3 Users per Persona for quality data
- Developers working *with*, not *after* HUE Designer
- Product validation with Users, after development
- Leverage existing, relevant assets
- UX is collaborative, not an external factor
- Proper Testing cycles
- Empathy goes a long way with users
- Established success criteria

Common UX Risk Factors

- Assumption of User needs
- Late HUE involvement limits UX value
- Vendor involvement without HON management
- Unclear expectations for UX deliverables
- Equating UX Design to Visual Design
- Program disorganization severely limits HUE effectiveness
- Rote execution of HUE processes without understanding

Thank You!

APPENDIX I: HOW IS SUCCESS MEASURED?

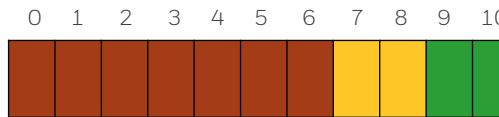

In order to determine success, there must be a means by which to measure the expected outcome.

Net Promoter Score (NPS) ®

"How likely is it that you would recommend <project> to a friend or colleague?"

Responses produce these metrics:

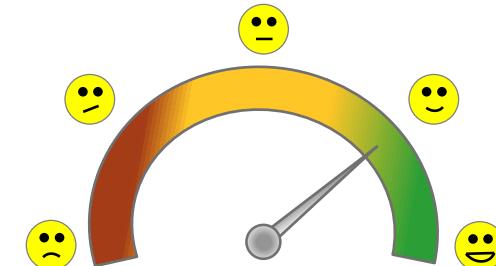

- **Promoters** (score 9-10)
Loyal advocates
- **Passives** (score 7-8)
Satisfied customers
- **Detractors** (score 0-6)
Actively dissuade others

Customer Satisfaction (CSat)

How services or products meet or surpass the intended customer's expectations.

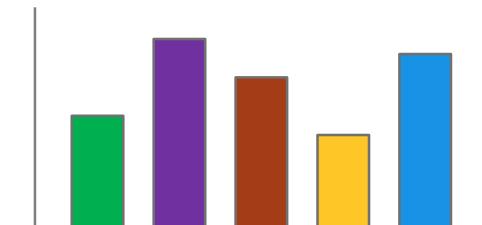

Captured with a survey that represents complete dissatisfaction (1) through complete satisfaction (5)

Return on Investment (ROI)

Loss of Productivity Formula reveals ROI of User Experience

$$\begin{aligned}
 & [(\text{user hours figuring out UI}) \times \\
 & (\# \text{ of users trying blocked sites}) \times \\
 & (\text{average user hourly salary})] + \\
 & [(\text{hours per support ticket}) \times \\
 & (\# \text{ of times users submit tickets}) \times \\
 & (\text{average support hourly salary})] \\
 & = \text{ $$ ROI $$ }
 \end{aligned}$$

Recognition

Recognition takes many forms:

- Informal Verbal (**Thank you**)
- Informal Written (**Email**)
- Formal Verbal (**Town Hall**)
- Formal Written (**Certificate**)
- Awards (**Bravo**)
- Bonuses (**HPD 9 block**)
